

## MAP Reports Portfolio

Revised December 2016

## MAP Reports

### A window into every student's achievement and growth

Measures of Academic Progress® (MAP®) creates a personalized assessment experience by adapting to each student's learning level—precisely measuring student progress and growth for each individual. With MAP, you'll have essential information about what each student knows and is ready to learn today.

### Four features of MAP reports

1. **Timely results.** MAP tests are scored as they are administered; students and proctors receive preliminary results at the test's conclusion. Following a test, you can access in-depth reports that show aggregate data by class, grade, school, and district. Most of these reports are available instantly.
2. **Context for student performance on MAP.** NWEA provides robust norms for achievement and growth over time. Norms let you compare your students' performance at a single point in time and their growth over time with the performance and growth of other U.S. students in the same grade at a comparable stage of the school year. NWEA college readiness benchmark information also lets you use MAP scores for students in grades 5 – 10 to predict likely future performance on ACT® achievement tests.
3. **Audience-specific reports with flexible display and grouping options.** You'll find a variety of MAP reports—including those that help you predict proficiency on state tests, group students for differentiated instruction, and engage students in mapping their own learning plan for the school year.
4. **Flexible reporting formats.** While most educators make good use of the pre-configured reports, some districts and agencies want the underlying data formatted to import into their own student information or assessment management systems. NWEA provides an online interface to order, free of charge, raw data reports at any time and frequency during a testing season.

For a comprehensive reports guide, log in to MAP and access the *MAP Reports Reference* document.

## Reports Annotation Key

- 1 Norms Reference Data:** Indicates which NWEA norming study your report data draw upon.
- 2 Growth Comparison Period:** The two terms for which you wish to receive student growth data.
- 3 Weeks of Instruction:** The number of instructional weeks prior to testing, as set by your school or district administrator.
- 4 Optional Grouping:** You may choose to view results by gender or ethnicity. If your district submitted a Program File, you may also view summary results by special program.
- 5 Small Group Display:** Summary groups of fewer than 10 students will not display unless you select this option while generating your report.
- 6 Mean RIT:** The group's average score for the subject in the given term.
- 7 Median RIT:** The group's middle score for the subject in the given term if individual scores were ordered from lowest to highest.
- 8 Standard Deviation:** The variability of scores within a group. A larger standard deviation reflects a wider range of scores.
- 9 Standard Error of Measurement or Error Margin:** An estimate of the amount of error in an individual's observed achievement score. The smaller the standard error, the more precise the achievement estimate.
- 10 Sampling Error:** An estimate of the amount of error in an aggregate statistic (commonly the mean) attributed to calculating the statistic on a population sample rather than on the entire population. The larger the group, the lower the sampling error.
- 11 Goal Performance Area or Instructional Area:** A learning area (e.g., Geometry) within a subject (e.g., Mathematics). On the *Class Breakdown by Goal Report*, click the instructional area to access the *Learning Continuum Class View*.
- 12 RIT Score:** A student's overall scale score on the test for a given subject.
- 13 RIT Range:** A range of RIT scores defined by the student's RIT score plus and minus one standard error of measurement. If the student took the test again relatively soon, you could expect his or her score to fall within this range about 68% of the time.
- 14 Percentile:** The percentage of students in the NWEA national norm sample, for this grade and subject area, that this student's score (or group of students' mean score) equaled or exceeded. Percentile Range is computed by identifying the percentile ranks of the low and high ends of the RIT range (see 13, above).
- 15 Lexile® Range:** A score (displayed as a 150-point range) resulting from a regression analysis of the NWEA Reading RIT scale and the MetaMetrics® Lexile® scale. This range helps you identify level-appropriate reading material for individual students.
- 16 Area of Relative Strength:** Chosen relative to the whole subject score, plus or minus the standard error. Relative strengths appear in **bold** in the *Class Report*.
- 17 Area of Relative Weakness or Suggested Area of Focus:** Chosen relative to the whole subject score, plus or minus the standard error. Relative weaknesses appear in *italics* in the *Class Report*.
- 18 Count with Projection:** The number of students in the growth count population with available growth projections.
- 19 Goal Score or Instructional Area Score:** The student's performance in the instructional area tested. Most reports show instructional area scores as RIT ranges (e.g., 187–199). The *Student Profile Report* shows the midpoint of the student's RIT range. *Class Breakdown* reports sort students into 10-point RIT bands, based on the midpoint of their instructional area RIT range.
- 20 Segmented Bar Graph:** Shows the number of students who scored within each percentage range—low, medium, and high. A student's range is based on the proportion of questions he or she answered correctly in that section of the test.
- 21 The Learning Continuum Class View:** Shows skills and concepts to develop with groups of students, based on 10-point RIT score bands that are appropriate for their readiness level.
- 22 The Learning Continuum Test View:** Shows skills and concepts to reinforce, develop, and introduce, based on students' RIT scores in each instructional area.
- 23 Learning Statements:** Statements that define learning objectives to help guide instruction.
- 24 Projected Proficiency Category:** Students are grouped in predicted proficiency categories based on NWEA linking studies that align the MAP RIT scale to state assessments and college and career readiness measures.
- 25 Projected RIT or RIT Projection:** The predicted future score for a student who makes typical growth, based on NWEA national growth norms. Projections take into account the student's initial score, grade level, and time between tests.
- 26 Projected Growth, Growth Projection, or Typical Growth:** The change in RIT score that about half of US students will make over time, based on student growth norms. The student's initial score plus projected growth equals projected RIT. The *Student Growth Summary Report* shows grade level growth projections, which are based on school growth norms.
- 27 Observed Growth or RIT Growth:** The change in a student's RIT score during the growth comparison period. On the *Student Growth Summary Report*, observed growth is the end-term mean RIT minus the start-term mean RIT.
- 28 Observed Growth Standard Error:** Amount of measurement error associated with observed term-to-term growth. If the student could be tested again over the same period with comparable tests, there would be about a 68% chance that growth would fall within a range defined by the term-to-term growth plus or minus the standard error.
- 29 Growth Index:** The difference between observed and projected growth. A zero indicates the student met projection exactly. Do not use this index to compare performance between students. Use the conditional growth index (see 31, below) instead.
- 30 Met Projected Growth:** Indicates **Yes** if the student's term-to-term growth equaled or exceeded the growth projection or **No** if growth was less than projected. A **±** means that the difference between the student's observed and projected growth is less than the observed growth standard error.
- 31 Conditional Growth Index:** This index allows for growth comparisons between students. It incorporates conditions that affect growth, including weeks of instruction prior to testing and students' starting RIT scores. A value of zero corresponds to mean growth, indicating growth matched projection.
- 32 Conditional Growth Percentile:** The conditional growth index (see 31, above) translated into national percentile rankings for growth.
- 33 Percent Met Projection:** The percentage of students whose end-term RIT scores met or exceeded their individual growth projections.
- 34 Percent of Projected Growth Met:** The total student growth divided by the total projected RITs, expressed as a percentage. Performance of 100% is considered average, meaning the overall student growth equaled the projections. Use in conjunction with 33, above.
- 35 Growth Count:** The number of students with valid test events for both terms.
- 36 Count Met Projection:** The number of students whose end-term RIT scores met or exceeded their individual growth projections.
- 37 Median Conditional Growth Percentile:** The middle value of this student group's conditional growth percentiles if the individuals' percentiles were ordered from smallest to largest.
- 38 School Conditional Growth Index:** This index allows for growth comparisons between grades within schools. It incorporates conditions that affect school growth, including weeks of instruction prior to testing and starting grade level mean RIT scores. A value of zero corresponds to mean growth, indicating growth matched projection.
- 39 School Conditional Growth Percentile:** The school conditional growth index (see 38, above) translated into national percentile rankings for growth.

# Class Breakdown by Projected Proficiency

## Annotation Key

- 12 RIT Score:** A student's overall scale score on the test for a given subject.
- 24 Projected Proficiency Category:** Students are grouped in predicted proficiency categories based on NWEA linking studies that align the MAP RIT scale to state assessments and college and career readiness measures.

### Class Breakdown by Projected Proficiency Report

<b>District:</b>	NWEA Sample District 3	<a href="#">Modify Options</a>
<b>Term Rostered:</b>	Fall 2015–2016

Percentage of Students Who Met or Exceeded Their Projected RIT

Percent of Projected Growth Met

Count of Students with Growth Projection Available and Valid Beginning and Ending Term Scores

Count of Students Who Met or Exceeded Their Projected RIT

Median Conditional Growth Percentile

### Annotation Key

- 1 Norms Reference Data: Indicates which NWEA norming study your report data draw upon.
- 2 Growth Comparison Period: The two terms for which you wish to receive student growth data.
- 3 Weeks of Instruction: The number of instructional weeks prior to testing, as set by your school or district administrator.
- 4 Optional Grouping: You may choose to view results by gender or ethnicity. If your district submitted a Program File, you may also view summary results by special program.
- 5 Small Group Display: Summary groups of fewer than 10 students will not display unless you select this option while generating your report.
- 13 RIT Range: A range of RIT scores defined by the student's RIT score plus and minus one standard error of measurement. If the student took the test again relatively soon, you could expect his or her score to fall within this range about 68% of the time.
- 14 Percentile: The percentage of students in the NWEA national norm sample, for this grade and subject area, that this student's score (or group of students' mean score) equaled or exceeded. Percentile Range is computed by identifying the percentile ranks of the low and high ends of the RIT range (see 13, above).
- 25 Projected RIT or RIT Projection: The predicted future score for a student who makes typical growth, based on NWEA national growth norms. Projections take into account the student's initial score, grade level, and time between tests.
- 26 Projected Growth, Growth Projection, or Typical Growth: The change in RIT score that about half of US students will make over time, based on student growth norms. The student's initial score plus projected growth equals projected RIT. The *Student Growth Summary Report* shows grade level growth projections, which are based on school growth norms.

#### Explanatory Notes

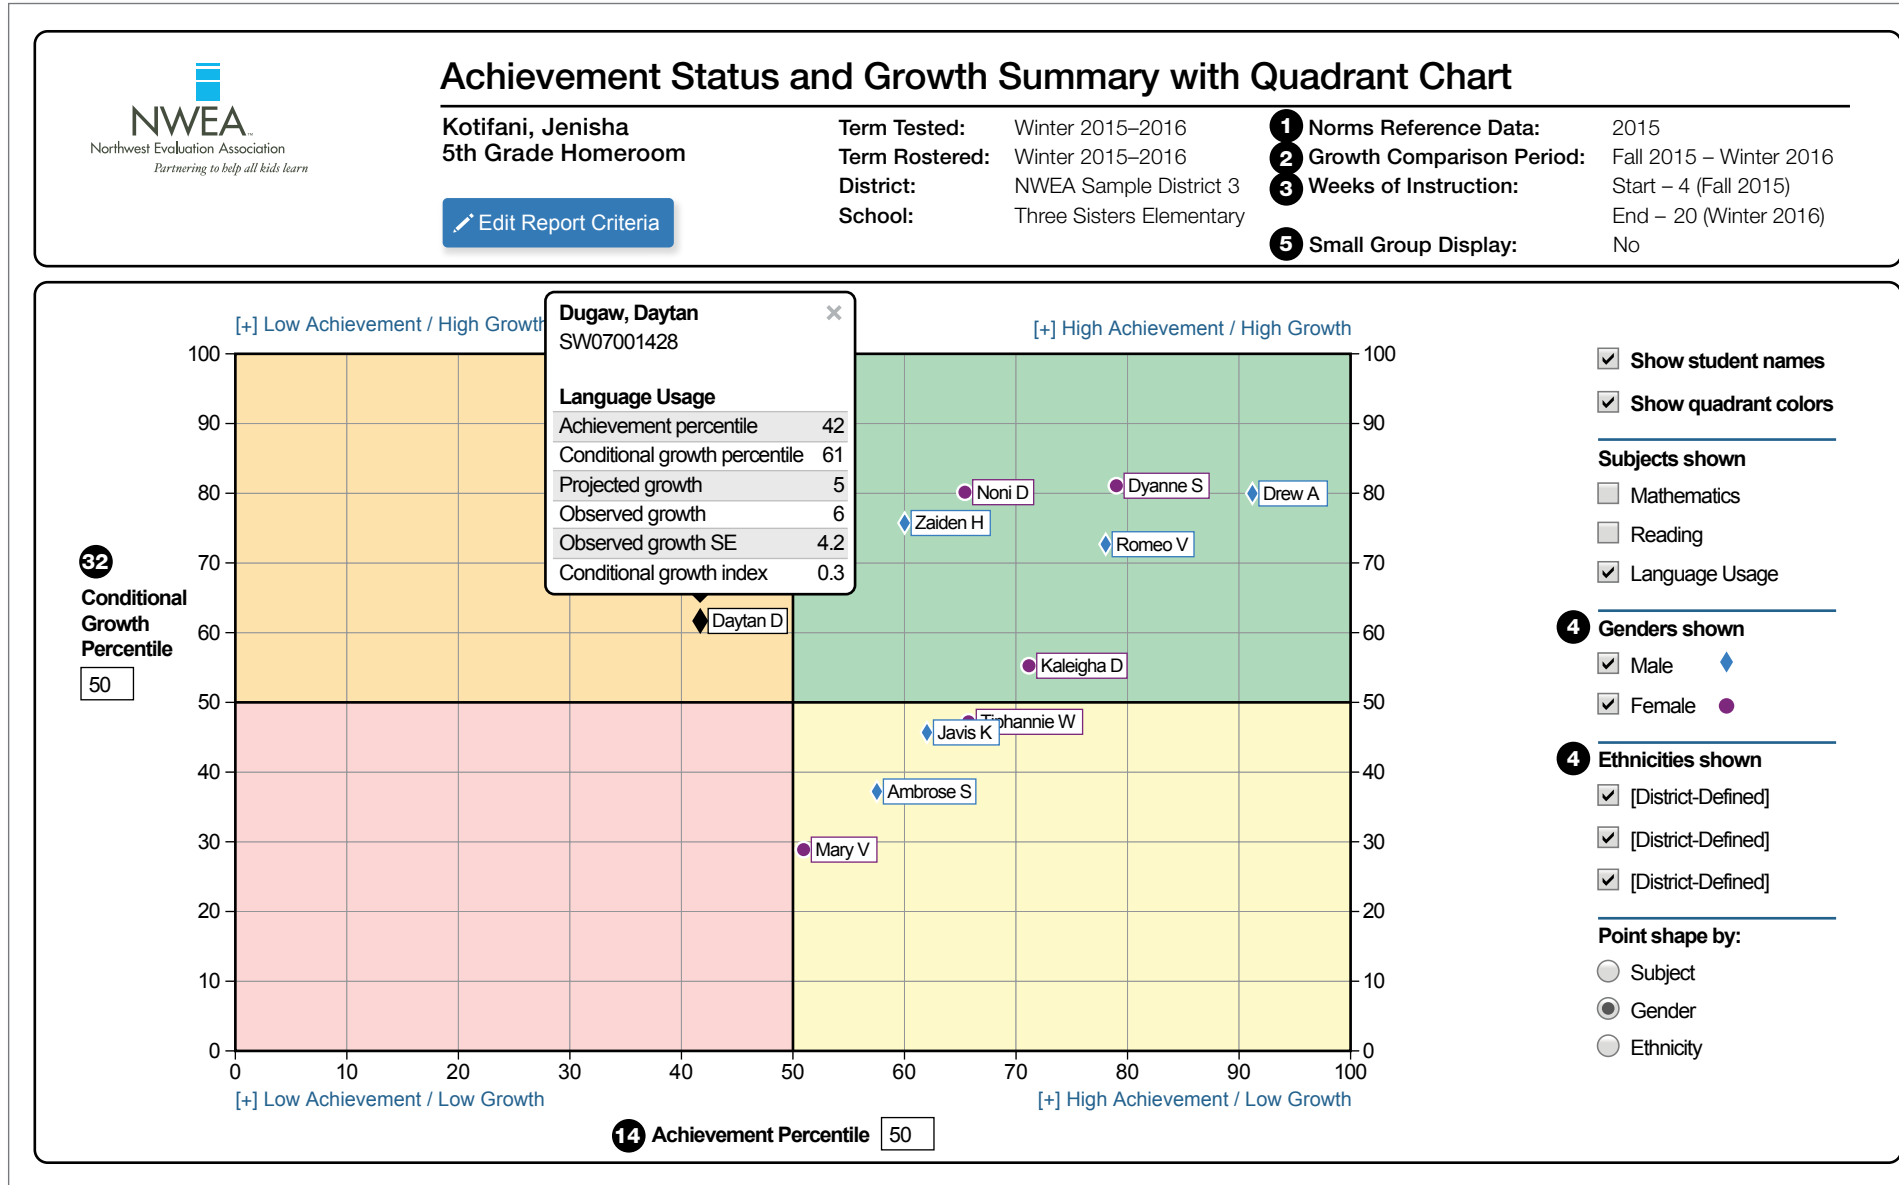

† SE on Observed Growth is greater than normal. Use metric with caution. ‡ Indicates that projected growth falls within standard error of observed growth.

\* SE or SEM is greater than normal. Use metric with caution.

### Annotation Key

- <sup>18</sup> **Count with Projection:** The number of students in the growth count population with available growth projections.
- <sup>27</sup> **Observed Growth or RIT Growth:** The change in a student's RIT score during the growth comparison period. On the *Student Growth Summary Report*, observed growth is the end-term mean RIT minus the start-term mean RIT.
- <sup>28</sup> **Observed Growth Standard Error:** Amount of measurement error associated with observed term-to-term growth. If the student could be tested again over the same period with comparable tests, there would be about a 68% chance that growth would fall within a range defined by the term-to-term growth plus or minus the standard error.
- <sup>29</sup> **Growth Index:** The difference between observed and projected growth. A zero indicates the student met projection exactly. Do not use this index to compare performance between students. Use the conditional growth index (see 31, below) instead.
- <sup>30</sup> **Met Projected Growth:** Indicates **Yes** if the student's term-to-term growth equaled or exceeded the growth projection or **No** if growth was less than projected. A ‡ means that the difference between the student's observed and projected growth is less than the observed growth standard error.
- <sup>31</sup> **Conditional Growth Index:** This index allows for growth comparisons between students. It incorporates conditions that affect growth, including weeks of instruction prior to testing and students' starting RIT scores. A value of zero corresponds to mean growth, indicating growth matched projection.
- <sup>32</sup> **Conditional Growth Percentile:** The conditional growth index (see 31, above) translated into national percentile rankings for growth.
- <sup>33</sup> **Percent Met Projection:** The percentage of students whose end-term RIT scores met or exceeded their individual growth projections.
- <sup>34</sup> **Percent of Projected Growth Met:** The total student growth divided by the total projected RITs, expressed as a percentage. Performance of 100% is considered average, meaning the overall student growth equaled the projections. Use in conjunction with 33, above.
- <sup>36</sup> **Count Met Projection:** The number of students whose end-term RIT scores met or exceeded their individual growth projections.
- <sup>37</sup> **Median Conditional Growth Percentile:** The middle value of this student group's conditional growth percentiles if the individuals' percentiles were ordered from smallest to largest.

# Achievement Status and Growth Summary with Quadrant Chart

## Annotation Key

- 1 Norms Reference Data:** Indicates which NWEA norming study your report data draw upon.
- 2 Growth Comparison Period:** The two terms for which you wish to receive student growth data.
- 3 Weeks of Instruction:** The number of instructional weeks prior to testing, as set by your school or district administrator.
- 4 Optional Grouping:** You may choose to view results by gender or ethnicity. If your district submitted a Program File, you may also view summary results by special program.
- 5 Small Group Display:** Summary groups of fewer than 10 students will not display unless you select this option while generating your report.
- 14 Percentile:** The percentage of students in the NWEA national norm sample, for this grade and subject area, that this student's score (or group of students' mean score) equaled or exceeded. Percentile Range is computed by identifying the percentile ranks of the low and high ends of the RIT range (see p.1, #13).
- 32 Conditional Growth Percentile:** The conditional growth index (see p.1, #31) translated into national percentile rankings for growth.

This image shows an excerpt from the larger Summary with Quadrant Chart.

# Student Goal Setting Worksheet

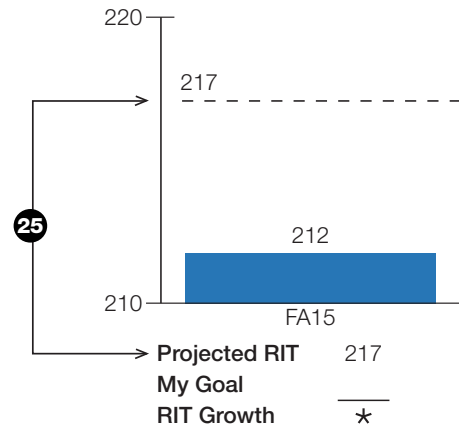

## Student Goal Setting Worksheet

Carter, Jasmine  
Student ID: 889905

Term Tested: Fall 2015–2016  
District: NWEA Sample District 3  
School: St. Helens Middle School

1 Norms Reference Data: 2015  
2 Growth Comparison Period: Fall 2015–Spring 2016  
3 Weeks of Instruction: Start – 4 (Fall 2015)  
End – 32 (Spring 2016)

## Annotation Key

- 1 Norms Reference Data: Indicates which NWEA norming study your report data draw upon.
- 2 Growth Comparison Period: The two terms for which you wish to receive student growth data.
- 3 Weeks of Instruction: The number of instructional weeks prior to testing, as set by your school or district administrator.
- 11 Goal Performance Area or Instructional Area: A learning area (e.g., Geometry) within a subject (e.g., Mathematics). On the *Class Breakdown by Goal Report*, click the instructional area to access the *Learning Continuum Class View*.
- 12 RIT Score: A student's overall scale score on the test for a given subject.
- 15 Lexile® Range: A score (displayed as a 150-point range) resulting from a regression analysis of the NWEA Reading RIT scale and the MetaMetrics® Lexile® scale. This range helps you identify level-appropriate reading material for individual students.
- 16 Area of Relative Strength: Chosen relative to the whole subject score, plus or minus the standard error. Relative strengths appear in **bold** in the *Class Report*.
- 17 Area of Relative Weakness or Suggested Area of Focus: Chosen relative to the whole subject score, plus or minus the standard error. Relative weaknesses appear in *italics* in the *Class Report*.
- 25 Projected RIT or RIT Projection: The predicted future score for a student who makes typical growth, based on NWEA national growth norms. Projections take into account the student's initial score, grade level, and time between tests.

## Annotation Key

- 1 Norms Reference Data:** Indicates which NWEA norming study your report data draw upon.
- 2 Growth Comparison Period:** The two terms for which you wish to receive student growth data.
- 11 Goal Performance Area or Instructional Area:** A learning area (e.g., Geometry) within a subject (e.g., Mathematics). On the *Class Breakdown by Goal Report*, click the instructional area to access the *Learning Continuum Class View*.
- 13 RIT Range:** A range of RIT scores defined by the student's RIT score plus and minus one standard error of measurement. If the student took the test again relatively soon, you could expect his or her score to fall within this range about 68% of the time.
- 14 Percentile:** The percentage of students in the NWEA national norm sample, for this grade and subject area, that this student's score (or group of students' mean score) equaled or exceeded. Percentile Range is computed by identifying the percentile ranks of the low and high ends of the RIT range (see 13, above).
- 15 Lexile® Range:** A score (displayed as a 150-point range) resulting from a regression analysis of the NWEA Reading RIT scale and the MetaMetrics® Lexile® scale. This range helps you identify level-appropriate reading material for individual students.
- 26 Projected Growth, Growth Projection, or Typical Growth:** The change in RIT score that about half of US students will make over time, based on student growth norms. The student's initial score plus projected growth equals projected RIT. The *Student Growth Summary Report* shows grade level growth projections, which are based on school growth norms.
- 27 Observed Growth or RIT Growth:** The change in a student's RIT score during the growth comparison period. On the *Student Growth Summary Report*, observed growth is the end-term mean RIT minus the start-term mean RIT.

Feedback ✕

Tab color shows how the student's RIT score ranks against similar students in the NWEA norms study:  
Red — Low percentile < 21  
Orange — Below average percentile 21-40  
Yellow — Average percentile 41-60  
Green — Above average percentile 61-80  
Blue — High percentile > 80  
Gray — Percentile unknown  
 \* When Most Recent is selected and the student does not have a valid test score in the current term, the most recent term for which a valid score is available will be shown.

## Annotation Key

- 9 Standard Error of Measurement or Error Margin:** An estimate of the amount of error in an individual's observed achievement score. The smaller the standard error, the more precise the achievement estimate.
- 12 RIT Score:** A student's overall scale score on the test for a given subject.
- 13 RIT Range:** A range of RIT scores defined by the student's RIT score plus and minus one standard error of measurement. If the student took the test again relatively soon, you could expect his or her score to fall within this range about 68% of the time.
- 14 Percentile:** The percentage of students in the NWEA national norm sample, for this grade and subject area, that this student's score (or group of students' mean score) equaled or exceeded. Percentile Range is computed by identifying the percentile ranks of the low and high ends of the RIT range (see 13, above).
- 16 Area of Relative Strength:** Chosen relative to the whole subject score, plus or minus the standard error. Relative strengths appear in **bold** in the *Class Report*.
- 17 Area of Relative Weakness or Suggested Area of Focus:** Chosen relative to the whole subject score, plus or minus the standard error. Relative weaknesses appear in *italics* in the *Class Report*.
- 24 Projected Proficiency Category:** Students are grouped in predicted proficiency categories based on NWEA linking studies that align the MAP RIT scale to state assessments and college and career readiness measures.

# Student Profile

## Growth Goals Module

### Annotation Key

- 25 Projected RIT or RIT Projection:** The predicted future score for a student who makes typical growth, based on NWEA national growth norms. Projections take into account the student's initial score, grade level, and time between tests.
- 26 Projected Growth, Growth Projection, or Typical Growth:** The change in RIT score that about half of US students will make over time, based on student growth norms. The student's initial score plus projected growth equals projected RIT. The *Student Growth Summary Report* shows grade level growth projections, which are based on school growth norms.

**UPCOMING GROWTH GOALS**

Typical Score 212

SET GOAL

**B**

**A** **Set a Custom Goal:** You may customize student goals by modifying the RIT score goal or RIT growth fields. Default values are based on typical growth.  
In this example, Ms. Copeland notices that Noah's Fall Reading score of 195 is below average. According to NWEA norms, the **typical score** (50th percentile) for 5th grade is a 212. She and Noah have already set a Winter goal that will help him catch up. They are about to set a Spring goal.

**B** **Custom Goal Graph:** This graph shows existing MAP scores and upcoming goals as they relate to NWEA achievement norms (color bands), growth projections (dotted line), and projected state and/or ACT proficiencies (vertical gray bars, if selected).

# MAP RIT Scale and NWEA Norms

## The RIT scale and robust national norms support efforts to boost every student's learning and growth.

MAP assessments use the RIT scale to create a grade-independent RIT score, which indicates the level of question difficulty a given student is capable of answering correctly about 50% of the time.

RIT scores help educators understand every student's current achievement level based on his or her zone of proximal development.

## NWEA provides norms based on a nationally representative sample of MAP test scores from over 10 million students.

**NWEA norming studies** provide a context for understanding a student's observed achievement and growth relative to the normative population. The studies also allow us to make predictions about what kind of growth is typical and atypical.

**Student-level achievement norms** help you see your students' percentile rankings in a nationally representative student population.

**Student-level growth norms** allow you to compare your students' growth with that of their academic peers.

**School-level norms** provide a context for comparing grade level achievement and growth in a single school relative to other schools across the nation.

# NWEA Linking Studies

**NWEA conducts linking studies that make it possible to predict students' likely performance on other measures, based on their MAP scores.**

**State-specific linking studies** predict proficiency on state accountability assessments.

The **MAP College Readiness Benchmarks Study** predicts college readiness for students in grades 5 – 9, measured by ACT® benchmarks.

The **College Explorer Tool** links students who have MAP scores in grades 5 – 9 to colleges and universities based on the median ACT scores of students who were admitted and enrolled in those institutions.

The **Smarter Balanced Linking Study** provides guidance on using MAP data to estimate student performance on the Smarter Balanced Assessment Consortium (SBAC) assessments.

To help provide context to MAP normative percentiles, the **Comparative Data to Inform Instructional Decisions document** includes multiple College and Career Readiness benchmarks, including those from ACT and SBAC assessments.

7	132	219.1	12.5	76	223.5	11.0	79	4.4	0.7	3.6	0.43	67	132	91	69	60
8	101	219.6	11.8	62	225.5	12.0	77	5.9	0.9	2.7	1.42	92	101	68	67	61

#### Explanatory Notes

\*\* Calculations not provided because students have no MAP results in at least one of the terms. The Growth Count is zero.  
 ‡ Growth Count provided reflects students with MAP results in both the Start and End terms. Observed Growth calculation is based on that student data.

### Annotation Key

- 6 Mean RIT:** The group's average score for the subject in the given term.
- 8 Standard Deviation:** The variability of scores within a group. A larger standard deviation reflects a wider range of scores.
- 14 Percentile:** The percentage of students in the NWEA national norm sample, for this grade and subject area, that this student's score (or group of students' mean score) equaled or exceeded. Percentile Range is computed by identifying the percentile ranks of the low and high ends of the RIT range (see p.1, #13).
- 18 Count with Projection:** The number of students in the growth count population with available growth projections.
- 26 Projected Growth, Growth Projection, or Typical Growth:** The change in RIT score that about half of US students will make over time, based on student growth norms. The student's initial score plus projected growth equals projected RIT. The *Student Growth Summary Report* shows grade level growth projections, which are based on school growth norms.
- 27 Observed Growth or RIT Growth:** The change in a student's RIT score during the growth comparison period. On the *Student Growth Summary Report*, observed growth is the end-term mean RIT minus the start-term mean RIT.
- 28 Observed Growth Standard Error:** Amount of measurement error associated with observed term-to-term growth. If the student could be tested again over the same period with comparable tests, there would be about a 68% chance that growth would fall within a range defined by the term-to-term growth plus or minus the standard error.
- 33 Percent Met Projection:** The percentage of students whose end-term RIT scores met or exceeded their individual growth projections.
- 35 Growth Count:** The number of students with valid test events for both terms.
- 36 Count Met Projection:** The number of students whose end-term RIT scores met or exceeded their individual growth projections.
- 37 Median Conditional Growth Percentile:** The middle value of this student group's conditional growth percentiles if the individuals' percentiles were ordered from smallest to largest.
- 38 School Conditional Growth Index:** This index allows for growth comparisons between grades within schools. It incorporates conditions that affect school growth, including weeks of instruction prior to testing and starting grade level mean RIT scores. A value of zero corresponds to mean growth, indicating growth matched projection.
- 39 School Conditional Growth Percentile:** The school conditional growth index (see 38, above) translated into national percentile rankings for growth.

- 11 Goal Performance Area or Instructional Area:** A learning area (e.g., Geometry) within a subject (e.g., Mathematics). On the *Class Breakdown by Goal Report*, click the instructional area to access the *Learning Continuum Class View*.
- 12 RIT Score:** A student's overall scale score on the test for a given subject.
- 19 Goal Score or Instructional Area Score:** The student's performance in the instructional area tested. Most reports show instructional area scores as RIT ranges (e.g., 187–199). The *Student Profile Report* shows the midpoint of the student's RIT range. *Class Breakdown* reports sort students into 10-point RIT bands, based on the midpoint of their instructional area RIT range.

This report is a spreadsheet download (file format .csv).

The example above has been slightly modified for readability. The header row has been bolded, a few columns hidden, and column widths adjusted. For instructional purposes, the data have been sorted according to 10-point RIT bands in the Geometry instructional area.

### Annotation Key

- 1 **Norms Reference Data:** Indicates which NWEA norming study your report data draw upon.
- 3 **Weeks of Instruction:** The number of instructional weeks prior to testing, as set by your school or district administrator.
- 5 **Small Group Display:** Summary groups of fewer than 10 students will not display unless you select this option while generating your report.
- 6 **Mean RIT:** The group's average score for the subject in the given term.
- 7 **Median RIT:** The group's middle score for the subject in the given term if individual scores were ordered from lowest to highest.
- 8 **Standard Deviation:** The variability of scores within a group. A larger standard deviation reflects a wider range of scores.
- 10 **Sampling Error:** An estimate of the amount of error in an aggregate statistic (commonly the mean) attributed to calculating the statistic on a population sample rather than on the entire population. The larger the group, the lower the sampling error.
- 11 **Goal Performance Area or Instructional Area:** A learning area (e.g., Geometry) within a subject (e.g., Mathematics). On the *Class Breakdown by Goal Report*, click the instructional area to access the *Learning Continuum Class View*.

## Annotation Key

- 9 Standard Error of Measurement or Error Margin:** An estimate of the amount of error in an individual's observed achievement score. The smaller the standard error, the more precise the achievement estimate.
- 11 Goal Performance Area or Instructional Area:** A learning area (e.g., Geometry) within a subject (e.g., Mathematics). On the *Class Breakdown by Goal Report*, click the instructional area to access the *Learning Continuum Class View*.
- 13 RIT Range:** A range of RIT scores defined by the student's RIT score plus and minus one standard error of measurement. If the student took the test again relatively soon, you could expect his or her score to fall within this range about 68% of the time.
- 14 Percentile:** The percentage of students in the NWEA national norm sample, for this grade and subject area, that this student's score (or group of students' mean score) equaled or exceeded. Percentile Range is computed by identifying the percentile ranks of the low and high ends of the RIT range (see 13, above).
- 15 Lexile® Range:** A score (displayed as a 150-point range) resulting from a regression analysis of the NWEA Reading RIT scale and the MetaMetrics® Lexile® scale. This range helps you identify level-appropriate reading material for individual students.
- 16 Area of Relative Strength:** Chosen relative to the whole subject score, plus or minus the standard error. Relative strengths appear in **bold** in the *Class Report*.
- 17 Area of Relative Weakness or Suggested Area of Focus:** Chosen relative to the whole subject score, plus or minus the standard error. Relative weaknesses appear in *italics* in the *Class Report*.
- 19 Goal Score or Instructional Area Score:** The student's performance in the instructional area tested. Most reports show instructional area scores as RIT ranges (e.g., 187–199). The *Student Profile Report* shows the midpoint of the student's RIT range. *Class Breakdown* reports sort students into 10-point RIT bands, based on the midpoint of their instructional area RIT range.

# MPG Class Breakdown by RIT

## Annotation Key

**12 RIT Score:** A student's overall scale score on the test for a given subject.

# MPG Class Screening

## MAP for Primary Grades Class Report

Sloan, Sue  
Class 01

District: NWEA Sample District 3  
School: St. Helens Elementary  
Date Range: Dec 19, 2015 to Dec 18, 2016

### Screening: Reading Early Literacy

Skills/Sub-Skills	Overall Score	Total Number of Students
	Scores	
Phonological Awareness		8
Matching Sounds		8
Rhyming Sounds		8
Manipulating Sounds		8
Visual Discrimination/Phonics		8
Visual Discrimination		8
Letter Identification		8
Matching Letters to Sounds		8
Concepts of Print		8
Concepts of Print: Pre-K		8
Concepts of Print: Beginning K		8
Concepts of Print: K-1		8

- Low: 0% to 40% correct
- Medium: >40% to <80% correct
- High: 80% to 100% correct
- N/A: Sub-skill not evaluated

### Annotation Key

**20 Segmented Bar Graph:** Shows the number of students who scored within each percentage range—low, medium, and high. A student's range is based on the proportion of questions he or she answered correctly in that section of the test.
